

# State Trauma Data, Trauma Patient Matching

Hernando Garzon, MD  
Chief Medical Officer, EMSA

# CEMSIS Trauma Data

- Two sources of data
  - Prehospital Electronic Patient Care Reports (ePCR)
  - Trauma Hospital Patient Registry data (NTDB complaint)
- Trauma Reports
  - Quarterly/Annual Overall Trauma Patient Characteristics report
    - Summary of ePCR and Hospital Registry Data since 2024
  - Core Measures
    - 4 current & 5 ‘test’ measures. Two are for Trauma:
      - TRA-2: Transport of Trauma Patients to a Trauma Center
      - TRA-3: Documentation of GCS, SBP, and RR for Trauma Patients [test]
  - CEMSIS – Trauma Patient Data Matching
    - “Integrating Prehospital and Trauma Registry Data: A California EMS Data Linkage Initiative”

# CALIFORNIA EMERGENCY MEDICAL SERVICES AUTHORITY

## Statewide Trauma Data Report

### Quarter 4 - 2024

Updated 8/29/25

# CEMSIS Introduction

- The California EMS Information System (CEMSIS) database is a large convenience sample — it consists solely of data submitted by participating EMS agencies, and it is not a population-based data set. In addition, the CEMSIS database inherits the individual deficiencies originating from its contributing entities.
- EMSA is continually cleaning and standardizing the data to improve data quality. Despite these efforts, errors remain for several reasons.
- The CEMSIS database is subject to the limitations of any “convenience sample”. As a “convenience sample”, the CEMSIS database is subject to various forms of bias. The most obvious problems are selection bias, the inconsistency with which clinical variables can be measured or documented, and inter-agency differences in treatment and transport practices.
- CEMSIS trauma data is indicated by the blue ambulance icon in this report.

## EMS Trauma Related Incidents

**Traumatic Injury**  
n = 177,841

**Traumatic Arrest**  
n = 778

**Trauma Patients meeting  
Trauma Triage Criteria  
and Transported to a  
Trauma Center**  
 $12,630/14,657 = 86\%$

**Tranexamic  
Acid  
Administration**  
n = 401

**Needle  
Thoracostomy  
Procedure**  
n = 264

**Transfusion of a  
Blood Product  
Procedure  
(by EMS Ground  
Transport)**  
n = 2

*By analyzing statewide EMS trauma data, providers can spot trends, optimize interventions, and improve survival rates during critical moments, leading to enhanced medical services and patient outcomes.*

# TRAUMATIC INJURY (T14.90)

# Traumatic Injury (T14.90)

Q4 2024

**177,841**

Total Records (n)

- 185,056 records before data cleaning
- 5,932 duplicate records removed (3%)
- 1,283 records removed due to age documentation error (<1%)
- 13,220 approximate duplicate records remain in final data set (7%+)

## Report Criteria

- Incident Dates = 10/1/24 – 12/31/24
- eResponse.05 Type of Service Requested = Emergency Response (Primary Response Area)
- eDisposition.27 Unit Disposition = Patient Contact Made
- eSituation.11 Provider's Primary Impression = Traumatic Injury (T14.90)

## National Guideline for the Field Triage of Injured Patients

### **RED CRITERIA** *High Risk for Serious Injury*

#### **Injury Patterns**

- Penetrating injuries to head, neck, torso, and proximal extremities
- Skull deformity, suspected skull fracture
- Suspected spinal injury with new motor or sensory loss
- Chest wall instability, deformity, or suspected flail chest
- Suspected pelvic fracture
- Suspected fracture of two or more proximal long bones
- Crushed, degloved, mangled, or pulseless extremity
- Amputation proximal to wrist or ankle
- Active bleeding requiring a tourniquet or wound packing with continuous pressure

#### **Mental Status & Vital Signs**

##### **All Patients**

- Unable to follow commands (motor GCS < 6)
- RR < 10 or > 29 breaths/min
- Respiratory distress or need for respiratory support
- Room-air pulse oximetry < 90%

##### **Age 0–9 years**

- SBP < 70mm Hg + (2 x age in years)

##### **Age 10–64 years**

- SBP < 90 mmHg or
- HR > SBP

##### **Age ≥ 65 years**

- SBP < 110 mmHg or
- HR > SBP

*Patients meeting any one of the above RED criteria should be transported to the highest-level trauma center available within the geographic constraints of the regional trauma system*

### **YELLOW CRITERIA** *Moderate Risk for Serious Injury*

#### **Mechanism of Injury**

- High-Risk Auto Crash
  - Partial or complete ejection
  - Significant intrusion (including roof)
    - >12 inches occupant site OR
    - >18 inches any site OR
  - Need for extrication for entrapped patient
  - Death in passenger compartment
  - Child (age 0–9 years) unrestrained or in unsecured child safety seat
  - Vehicle telemetry data consistent with severe injury
- Rider separated from transport vehicle with significant impact (eg, motorcycle, ATV, horse, etc.)
- Pedestrian/bicycle rider thrown, run over, or with significant impact
- Fall from height > 10 feet (all ages)

#### **EMS Judgment**

##### **Consider risk factors, including:**

- Low-level falls in young children (age ≤ 5 years) or older adults (age ≥ 65 years) with significant head impact
- Anticoagulant use
- Suspicion of child abuse
- Special, high-resource healthcare needs
- Pregnancy > 20 weeks
- Burns in conjunction with trauma
- Children should be triaged preferentially to pediatric capable centers

**If concerned, take to a trauma center**

*Patients meeting any one of the YELLOW CRITERIA WHO DO NOT MEET RED CRITERIA should be preferentially transported to a trauma center, as available within the geographic constraints of the regional trauma system (need not be the highest-level trauma center)*

# Trauma Patients Meeting Trauma Triage Criteria and Transported to a Trauma Center

Q4 2024

12,630

Total Numerator Records (n)

- 12,801 numerator records before data cleaning
- 66 duplicate records removed (<1%)
- 105 records removed due to age documentation error (<1%)
- 65 approximate duplicate records remain in final data set (<1%)

## Report Criteria

- Incident Dates = 10/1/24 – 12/31/24
- eResponse.05 Type of Service Requested = Emergency Response (Primary Response Area)
- eDisposition.30 Transport Disposition = Transport by this EMS Unit or Transport by Another EMS Unit
- eResponse.07 Unit Transport and Equipment Capability = Ground and Air Transport
- eInjury.03 Trauma Triage Criteria (High Risk for Serious Injury) = Red Box 1 and 2 of ACS Field Triage of Injured Patients Criteria
- eInjury.04 Trauma Triage Criteria (Moderate Risk for Serious Injury) = Yellow Box 1 of ACS Field Triage of Injured Patients Criteria
- eDisposition.23 Hospital Capability = Trauma Center Level 1, 2, 3, 4
- eDisposition.02 Destination/Transferred To, Code = Trauma Center Code List

# Patient Registry Introduction

- Patient Registry integrates information across the medical community, allowing data to flow from the ambulance to the hospital to state and national registries. Hospitals have secure access to their own patient registry.
- Patient Registry currently collects trauma data from California designated trauma facilities based on the most recent National Trauma Data Bank Standard.
- EMSA is continually cleaning and standardizing the data to improve data quality. Despite these efforts, errors remain for several reasons.
- Patient Registry trauma data is indicated by the gold hospital icon in this report.

The following outlines discrepancies between the number of CEM SIS records for patients meeting trauma triage criteria who were transported to a trauma center and the number of corresponding Patient Registry records for trauma patients in Q4 2024.

## CEM SIS

- Total traumatic injury patients (T14.90): 185,056
- Transported to trauma center: 73,138 (37%)
- Missing / incomplete triage fields:
  - 11% (20,100) – elnjury.03 & elnjury.04 = Not Applicable / Not Recorded / Blank
  - 3% (5,102) – Blank elnjury.03, only Step 4 in elnjury.04 (excluded from TRA-2)
- TRA-2 Numerator (met criteria + transported): 12,801

*\*percentages are estimates based on raw data*

## PATIENT REGISTRY

- 82% arrived by EMS
- 18% arrived by other means

# Integrating Prehospital and Trauma Registry Data

## Integrating Prehospital and Trauma Registry Data: A California EMS Data Linkage Initiative

### Emergency Medical Services Authority

California Health and Human Services Agency  
Preventive Health and Health Services Block Grant  
(PHHSBG)

Elizabeth Basnett, Director

Hernando Garzon, MD, Chief Medical Officer

Gabrielle Santoro, Chief Deputy Director

JUNE 12, 2025

EMSA Publication #SYS 100-21

- CEMSIS and Trauma Data Linkage Initiative Report is a deliverable for the Preventive Health and Health Services Block Grant (PHHSBG)
- Utilizes probabilistic matching to link patient records between two independent data sources: CEMSIS and Patient Registry
- Structured three-step matching process:
  - 1. Exact matching (records with identical key details),
  - 2. Refined criteria-based matching (using additional patient and incident details), and
  - 3. Fuzzy matching (allowing minor discrepancies, such as dates differing by up to one day).

# Patient Matching – Data from Jan 1 – Jun 30, 2024

## GENERAL CHARACTERISTICS AND DEMOGRAPHICS

FIGURE 1: MATCHED AND UNMATCHED CEMSIS RECORDS

Of the 22,745 CEMSIS records for trauma patients who met ACS Trauma Triage Criteria Steps 1, 2, and 3 for Q1-Q2 2024, 10,281 records (45.2%) were successfully matched to corresponding records in the Patient Registry. Approximately 6% of the matched records may have duplication (same patient, same incident) and could not be removed from the dataset due to variations in documentation by providers. 10% of unmatched records did not have a date of birth recorded, possibly preventing linkage.

# Patient Matching – Data from Jan 1 – Jun 30, 2024

**FIGURE 2: MATCHED RECORDS BY DATA LINKAGE HIERARCHY**

Linkage Phase	Linkage Name	Patient Demographics			Patient Characteristics	Date	Location		Records Matched
		Date of Birth	Age and Age Units	Gender	Patient Postal Code	Incident Date	Scene Incident County	Facility Destination Code	
1	Initial	Exact				Exact			8,038
2	Refined Criteria	Drop	Exact	Exact	Exact	Exact	Exact	Exact	2,243
3A	Fuzzy 1	Exact				+/- 1 Day			0
3B	Fuzzy 2	Drop	Exact	Exact	Exact	+/- 1 Day	Exact	Exact	0
Total: 10,281									

## Implications for Trauma System Optimization

These findings underscore the regional variations in trauma triage documentation and injury severity, emphasizing the need for ongoing evaluation of EMS triage protocols across LEMSAs. The variability in TTC documentation and severe trauma proportions suggests opportunities for enhanced EMS training, improved triage standardization, and more targeted trauma resource allocation. By better understanding these regional trends, policymakers and EMS administrators can refine prehospital triage strategies to optimize trauma system performance and patient outcomes.
